Muhamad Akhdan Ramadhan

Computer Engineering Technology Student · Automation & API Integration

Bogor, Indonesia / m.akhdanramadhan@apps.ipb.ac.id
makhdanramadhan-ui.github.io / github.com/makhdanramadhan-ui

PROFILE

Computer Engineering Technology student at IPB University building personal tools with Node.js, Python, and APIs. Projects include job discovery, cross-device service handoff, and serverless utilities, with a focus on saved state, failure handling, and human review. Interested in remote freelance automation, backend integration, and AI tooling.

SELECTED PERSONAL PROJECTS

Reddit Job Discovery & Proposal Assistant

Node.js / SQLite / LLM API / Telegram / Gmail SMTP

- Built scheduled RSS scanning, software-role filters, AI-assisted proposal drafting, and duplicate-post tracking in SQLite.
- Added email delivery when requested by a post, a persistent queue for safe SMTP retries, and Telegram approval for email replies; Reddit DMs remain manual.

Cross-Device Bot Server Controller

Node.js / PowerShell / Tailscale / SQLite

- Built a desktop/laptop handoff tool for background services over a private network.
- Coordinates peer-process shutdown, saved-state and session transfer, service startup, and health checks on the selected machine.

Serverless Expense Tracker & Device Locator

Cloudflare Workers / D1 / MacroDroid / Telegram Bot API

- Connected personal Android banking notifications to a serverless API and SQL storage through webhooks; added Telegram requests for phone location and battery level.

Automated Video Processing Pipeline

Node.js / FFmpeg / LLM API / SQLite

- Built vertical-video batch processing with blur-padding, audio mixing, and text overlays; connected AI-assisted hook generation, saved job state, and Telegram controls.

TECHNICAL SKILLS

Languages: JavaScript / Node.js, Python, PowerShell, SQL

Automation & AI: REST APIs, LLM integration, Puppeteer, Telegram Bot API, n8n

Cloud & data: Cloudflare Workers, D1, SQLite, Docker Compose

Tools: Git, Tailscale, FFmpeg, MacroDroid
